

***CKC Breed Standard***  
**Spanish Water Dog**  
***(Perro de agua español)***  
***January 2009***  
**Standard Provided by ABIDS**

**Origin & Purpose:** The Spanish Water dog is an ancient and rustic all purpose dog found on the Iberian Peninsula. His origin is similar to the Barbet. A herding, hunting and fishing dog with well developed sense of smell, sight and sound. his great learning ability adapts to almost all situations.

**General Appearance:** Robust, medium sized dog with well developed muscle due to regular exercise. Well proportioned (medium weight), dolichocephalic, of rather elongated; the profile is rectilinear; distinctive coat.

**Temperament:** Faithful, obedient, gay, hard working, watchful and well balanced.

**Size: Size & Weight:** Height at withers: males 44 to 50 cm (17 1/2 - 19 1/2 inches) females 40 to 46 cm (15 1/2 - 18 inches) 2 cm maximum deviation are admitted in both sexes whenever the subject maintains balance according to his height at withers.

Weight: males 18 - 22 kg (40 - 48 lbs) females 14 - 18 kg (31 - 40 lbs)

Important Proportions

- Length of body / size (height at withers) = 9 / 8.

- Depth of chest / size (height at withers) = 4 / 8.

- Length of muzzle / length of skull = 2 / 3.

**Coat & Colour: Skin:** Supple, fine and well adhering to the body. Can be pigmented brown or black, or be without pigment according to the colour of the coat. The same applies to the mucous membranes.

**Coat:** Distinctive coat which is curly and woolly in texture. Curly when short and may form cords when long. The recommended maximum length of the hair for shows is 12 cm (15 cm extending the curl) and the minimum is 3 cm to see the quality of the curl. The puppies always are born with curly hair. The coat should not be clipped for aesthetic purposes, it should look natural.

**Colour:**

- Solid: White, black and chestnut in their different shades.
- Bicoloured : White and black or white and brown in their different shades.
- Tricoloured subjects, and black and tan as well as hazelnut and tan dogs are not admitted.

**Head:** Strong, carried with elegance. **Skull:** Flat with only slightly marked occipital crest. Axes of skull and muzzle parallel. **Stop:** Facial-cranial depression gentle, only slightly marked. **Face:** Profile is rectilinear. **Nose:** Nostrils well defined. Nose is of the same colour or slightly darker than the darkest tone of the coat. **Lips:** Well fitting; labial corners well defined. **Teeth:** Well formed, white, with well developed canines. **Eyes:** Slightly oblique position, very expressive; of a hazel to chestnut colour, should harmonize with the colour of the coat. The conjunctiva is not apparent. **Ears:** Set at medium height, triangular and drooping.

**Neck:** Short, well muscled, without dewlap, well set into the shoulders.

**Forequarters:** Strong and vertical. Shoulders: Well muscled and oblique. Upper arms: Sturdy. Elbows: Close to the chest and parallel. Forearms: Straight and sturdy. Carpus(Pastern joint) and pastern: Straight, rather short. Front feet: Rounded, toes tight, nails of varied colours; resistant pads.

**Body:** Robust. **Topline:** Straight. **Withers:** Hardly marked. **Back:** Straight and powerful. **Croup:** Slightly sloping. **Chest:** Broad and well let down – ribs well arched; diameter of thorax ample indicating considerable respiratory capacity. **Underline:** Belly slightly tucked up.

**Hindquarters:** Perfectly vertical with not too pronounced angulations and muscles capable of transmitting to the body a very energetic impulsion and the spring necessary for easy and elegant jumping. Upper thighs: Long and well muscled. Second thighs: Well developed. Hock joint: Well let down. Hock: Short, lean and perpendicular to the ground. Hind feet: As the forefeet.

**Tail** Set at medium height. Docking must be done at the height of the 2nd to the 4th caudal vertebra. Certain subjects show a congenital shortened tail (brachyouria).

**Gait:** The preferred gait is a trot.

**Fault:** Any departure from the foregoing points should be considered a fault and the seriousness with which the fault should be regarded should be in exact proportion to its degree.

**Serious Faults:**

- Dorso-lumbar region distinctly saddle-backed.
- Limbs incorrect.
- Belly let down or excessively tucked up.

**Disqualification:**

- Aggressive or overly shy.
  - Inferior or superior prognathism.
  - Presence of dewclaws.
  - Smooth or wavy coat.
  - Albinism.
  - Spotty or flecked coat, black and tan or chestnut and tan coat.
- Any dog clearly showing physical or behavioural abnormalities shall be disqualified.

*N.B. : Male animals should have two apparently normal testicles fully descended into the scrotum.*
